

Task 1: Test strategy

Date of test	Component to be tested	Type of test to be carried out	Prerequisites and dependencies
10/04/2026	Registration	White box testing, black box testing, functionality testing, security testing, integration testing	Data Inputs Needed <u>Test Data</u> Normal: Email: johnsmith@gmail.com Password: SecurePass123! Erroneous: Email: johnsmith@ Password: 123 Extreme: Email: johnsmith12345678901234567890verylongemailaddress@gmail.com Password: Aaaaaaaaaaaaaaaaaaaaaaaaaaaaaa aaaaaaaaaaaaaaaaaaaaaaaaaaaaa123 Must have completed the registration form functionality, including all required fields and validation rules. The system must be connected to the database to store user

			details successfully. Tester will complete the registration process to verify correct form submission, validation messages, and successful account creation. Example: Submitting valid details should create a new user account. Invalid inputs should trigger appropriate error messages.
10/04/2026	User Log In	White box testing, black box testing, functionality testing, security testing, integration testing	Data Inputs Needed <u>Test Data</u> Normal: Email: johnsmith@gmail.com Password: SecurePass123! Erroneous: Email: johnsmith@ Password: 123 Extreme: Email: johnsmith12345678901234567890verylongemailaddress@gmail.com Password: Aaaaaaaaaaaaaaaaaaaaaaaaaaaaaa

			aaaaaaaaaaaaaaaaaaaaaa123 Must have completed the login functionality, including username/email and password fields with validation. User accounts must already exist in the system database for authentication. Tester will attempt to log in using valid and invalid credentials to verify correct authentication behaviour and error handling. Example: Entering correct login details should grant access to the system. Incorrect details should display appropriate error messages
10/04/2026	Google register	White box testing, black box testing, functionality testing, security testing, integration testing	No Data Inputs Needed Requires a valid Google account. Must have completed Google OAuth integration and configured the authentication service correctly.

			The system must be connected to the database to create or retrieve user accounts linked to Google credentials. Tester will select "Sign in with Google" to verify successful authentication, account linking/creation, and correct redirection. Example: Selecting a valid Google account should log the user in. Cancelling or failing authentication should return an appropriate error.
10/04/2026	Google Log in	White box testing, black box testing, functionality testing, security testing, integration testing	No Data Inputs Needed Requires a valid Google account Must have completed Google OAuth Integration and configured the authentication service correctly. The system must be connected to the database to retrieve user accounts linked to Google credentials. Tester will select "Log in with Google" to log in into their pre-

			registered Google account. Example: Selecting a valid user account should log the user in. Cancelling or failing authentication should return an appropriate error.
10/04/2026	Navigation Bar	Black box testing, Functional testing, Integration testing	No Data Inputs Needed Must have completed the navigation bar and linked pages should exist and be completed. Tester will navigate to each page via the nav bar to verify that each correct page loads Example: Selecting "Recipes" should load the Recipes page.
10/04/2026	Log out	Black Box Testing, Integration Testing, Unit Testing	No Data Inputs Needed Requires a user to already be logged into the system. Must have completed the logout functionality and implemented session management correctly. The system must be connected to the database to update and

			manage user session status. Tester will select the "Log out" option to end their current session. Example: Selecting log out should successfully end the user session and redirect them to the login or home page. Attempting to access restricted pages after logging out should require the user to log in again.
13/04/2026	Add items to basket	White Box Testing, Black Box Testing, Integration Testing	Data Inputs Needed <u>Test Data</u> Normal: Product: Carrot Quantity: 1 Erroneous: Product: Add unavailable item Quantity: -1 Extreme: Product: Carrot Quantity: 999 Must have completed basket functionality and product listing integration. The system must be connected

			to the database to store selected items. Tester will select an item and add it to the basket by pressing the "Add to Cart" button or the "+" button. Example: Selecting an item should add it to the basket. Invalid selections should show an error.
13/04/2026	Payment	White Box Testing, Black Box Testing, Integration Testing	Data Inputs Needed <u>Test Data</u> Normal: Card number: 9999 9999 9999 9999 (valid card and 16 digits long) Expiration date: 02/27 (date in the future) Name: Jane Doe Erroneous: Card number: kkgd asas mama 9999 Expiration date: aa/ll Name: Sunshine143 Extreme:

			Card number: 4242 4242 4242 4242 4242 Expiration date: 00/00 Name: (Blank) Must have completed checkout and payment functionality. The system must be connected to the database to process and store orders. Tester will proceed to checkout and complete the purchase. Example: Valid purchase completes successfully. Invalid payment shows an error.
13/04/2026	User Role Logins	White Box Testing, Black Box Testing, Unit testing	Data Inputs Needed <u>Test Data</u> Normal: Email: Farmer@test.com Password: Farmer123! Email: User@test.com Password: User123! Must have Seeded User Roles and must have implemented

			role-based access control and permissions correctly. The system must be connected to the database to retrieve and enforce user roles Tester will log in using both a normal user account and a farmer account to verify access permissions and functionality differences. Example: A normal user should only access general features (e.g. browsing and purchasing items). A farmer account should have access to additional features (e.g. managing products or viewing farmer-specific pages). Invalid or undefined roles should be rejected or handled securely.
15/04/2026	Favouriting Items	Black Box Testing, Unit Testing, Integration Testing	Data Inputs Needed <u>Test Data</u> Normal: Logged-in user favourites item Erroneous: Not logged in and favouriting

			items Extreme: Favouriting many items repeatedly Must have completed the favourites functionality. The system must be connected to the database to store user preferences. Tester will select an item and add it to favourites. Example: Item should be saved. If not logged in, an error should appear.
15/04/2026	Sign up for loyalty program	Black Box testing, Integration Testing, Security Testing	Data Inputs Needed Test Data Normal: Name: Jane Doe Email: janedoe@gmail.com Phone: 07123456789 Erroneous: Name: (Blank) Email: janedoe@ Phone: abc123 Extreme:

			Name: Aaaaaaaaaaaaaaaaaaaaaaaaaa aaaaaaaaaaaaaaaaaaaaa Email: janedoe1234567890123456789 0verylongemailaddress@gmail.c om Phone: 99999999999999999999 Must have completed loyalty program functionality. The system must be connected to the database to store membership details. Tester will sign up for the loyalty program. Example: Successful sign-up enrols user to loyalty program. Errors shown for invalid input.
15/04/2026	Seasonal Boxes Page	Black Box testing, Integration testing	No Data Inputs Needed Requires seasonal box products to be available. Must have completed the page and product display functionality. The system must be connected to the database to retrieve

			products. Tester will open the seasonal boxes page. Example: Page should display available boxes correctly.
15/04/2026	Fruit and Veg page	Black Box Testing, Integration testing	No Data Inputs Needed Requires fruit and veg products to be available. Must have completed the page and product display functionality. The system must be connected to the database to retrieve products. Tester will open the fruit and veg page. Example: Items should display correctly.
15/04/2026	Meat Page	Black Box Testing, Integration Testing	No Data Inputs Needed Requires meat products to be available. Must have completed the page and product display functionality. The system must be connected

			to the database to retrieve products. Tester will open the meat page. Example: Items should display correctly.
15/04/2026	New arrivals page	Black box testing, integration testing	No Data Inputs Needed Requires new products to be added to the system. Must have completed dynamic product update functionality. The system must be connected to the database to retrieve latest items. Tester will open the new arrivals page. Example: Latest products should be displayed.
15/04/2026	Update on weekly new arrivals	Black box testing, integration testing, Unit Testing	Data Inputs Needed <u>Test Data</u> Normal: Email: johnsmith@gmail.com Erroneous: Email: johnsmith@

			Extreme: Email: johnsmith12345678901234567890verylongemailaddress@gmail.com Must have completed email subscription functionality and validation rules. The system must be connected to the database or email service to store subscriptions. Tester will enter an email and press subscribe. Example: Valid email subscribes successfully. Invalid email shows error.
15/04/2026	Filtering	Black Box Testing, Integration Testing	Data Inputs Needed Test Data Normal: Filter: Category = Fruit & Veg Price Range: £1 – £10 Availability: In stock Erroneous: Filter: Category = (Invalid category e.g. "xyz123") Price Range: £10 – £1 (min greater than max)

			Availability: (Blank) Extreme: Filter: All categories selected Price Range: £0 – £10000 Availability: Rapidly changing filters multiple times Must have completed filtering functionality across product pages. The system must be connected to the database to retrieve and filter products correctly. Tester will apply different filters and observe the results. Example: Applying valid filters should display matching products. Invalid filters should return no results or show an appropriate message. Extreme usage should not crash the system and should update results correctly.
15/04/2026	Page Resizing	Black Box Testing, Integration Testing	No Data Inputs Needed Requires the website to support responsive design across different screen sizes. Must have completed

			responsive UI design and ensured layouts adapt correctly when the browser window is resized. The system must handle dynamic resizing without breaking layout or functionality. Tester will press the square (maximise/restore) button next to the "X" on the browser window and resize the page multiple times. Example: The page should adjust correctly to different window sizes without overlapping elements, broken layouts, or missing content. Rapid resizing should not cause visual or functional issues.
15/04/2026	Search	Black box testing, Functional testing, Integration testing, Usability testing	Data Inputs Needed Test Data Normal: Search: apple Search: chicken breast Erroneous: Search: @@@### Search: (Blank)

			Extreme: Search: aaaaaaaaaaaaaaaaaaaaaaaaaaaa aaaaaaaaaaaaaaaaaaaaaaaaaaaa Search: appleappleappleappleappleapple apple Must have completed search functionality across the website. The system must be connected to the database to retrieve relevant results based on user input. Tester will enter different search terms into the search bar and submit. Example: Valid search terms should return relevant results. Invalid or empty inputs should show an appropriate message. Extreme inputs should not crash the system and should be handled efficiently.
15/04/2026	About Us – Ethics Page	Black Box Testing, Integration Testing	No Data Inputs Needed Requires the ethics page content to be created. Must have completed the page

			design and content integration. Tester will open the ethics page. Example: Page content should display correctly.
15/04/2026	About Us – Farmers Page	Black Box Testing, Integration Testing	No Data Inputs Needed Requires farmer information to be available. Must have completed the page and profile display functionality. Tester will open the farmers page. Example: Farmer profiles should display correctly.
15/04/2026	Recipe Page	Black Box Testing, Integration testing	No Data Inputs Needed Requires recipes to be available. Must have completed recipe listing functionality. Tester will open the recipes page. Example: Recipes should be listed correctly.

15/04/2026	View Recipe	Black Box testing, Integration testing, Unit Testing	No Data Inputs Needed Requires individual recipe pages to be created. Must have completed recipe detail functionality. Tester will select and open a recipe. Example: Recipe details should display correctly.
15/04/2026	Searching in Recipe search bar	Black Box testing, integration testing	Test Data Normal: Search: chicken Erroneous: Search: (Blank) Extreme: Search: aaaaaaaaaaaaaaaaaaaaaaaaaaaa aaaaaaaaaa Must have completed search functionality and validation. The system must be connected to the database to retrieve results. Tester will enter a search term

			and submit. Example: Relevant results should appear. Invalid input handled correctly.
15/04/2026	Notified about weekly recipes	Black box testing, integration testing, Unit Testing	Data Inputs Needed Test Data Normal: Email: johnsmith@gmail.com Erroneous: Email: johnsmith@ Extreme: Email: johnsmith12345678901234567890verylongemailaddress@gmail.com Must have completed email subscription functionality. The system must be connected to the database or email service. Tester will enter email and subscribe. Example: Valid email subscribes successfully. Invalid email shows error.

16/04/2026	Basket Page	Black Box testing, Integration testing	No Data Inputs Needed Requires items to be in the basket. Must have completed basket display functionality. Tester will open the basket page. Example: Items in basket should display correctly.
16/04/2026	Email Validation	Black Box testing, functionality testing, integration testing, security testing	Data Inputs Needed <u>Test Data</u> Normal: Email: johnsmith@gmail.com Erroneous: Email: johnsmith@ Extreme: Email: johnsmith12345678901234567890verylongemailaddress@gmail.com Must have implemented email validation rules.

			Tester will input emails into forms. Example: Valid email accepted, invalid rejected.
16/04/2026	Password validation	Black box testing, functionality testing, security testing	Data Inputs Needed Test Data Normal: Password: SecurePass123! Erroneous: Password: 123 Extreme: Password: Aaaaaaaaaaaaaaaaaaaaaaaaaaaaaa aaaaaaaaaaaaaaaaaaaaaaaaaaaaa1 23 Must have password rules implemented. Tester enters passwords. Example: Strong passwords accepted, weak rejected.
16/04/2026	Required Fields Validation	Black Box testing, Integration Testing	Data Inputs Needed Test Data Normal:

			All fields completed Erroneous: Missing email Extreme: All fields left blank Must have required field validation. Tester submits forms. Example: Missing fields show errors.
16/04/2026	Input Length Validation	Black Box testing, Boundary testing, Integration Testing	Data Inputs Needed <u>Test Data</u> Normal: Name: John Smith Erroneous: Name: J Extreme: Name: Aaaaaaaaaaaaaaaaaaaaaaaaaaaaaa aaaaaaaaaaaaaaaaaaaaa Must have input length restrictions.

			Tester inputs different lengths. Example: Accept valid length, reject too short/long
16/04/2026	Format Validation	Black Box Testing, Integration Testing	Data Inputs Needed <u>Test Data</u> Normal: Phone: 07123456789 Erroneous: Phone: abc123 Extreme: Phone: 99999999999999999999 Must validate formats correctly. Tester inputs values. Example: Correct formats accepted.
16/04/2026	View Orders	Black box testing, functionality testing, integration testing	Data Inputs Needed <u>Test Data</u> Normal: Orders: Existing orders Erroneous:

			Orders: None Extreme: Orders: 1000+ orders Must have dashboard connected to database. Tester views orders. Example: Orders display correctly.
16/04/2026	Access Control	Black box testing, security testing, functionality testing	Data Input Needed <u>Test Data</u> Normal: Role: Farmer Erroneous: Role: Normal user Extreme: Role: Multiple roles Must have role permissions. Tester accesses dashboard. Example: Only farmers allowed.

16/04/2026	Order Details View	Black box testing, functionality testing, integration testing	No Data Input Needed Must support order viewing. Tester opens order. Example: Details display correctly.
16/04/2026	Keyboard Navigation	Usability testing, accessibility testing	No Data Inputs Needed Tester navigates using keyboard. Example: All elements accessible.
16/04/2026	Screen Reader Compatibility	Usability testing, accessibility testing	No Data Inputs Needed Tester uses screen reader. Example: Content is readable.
16/04/2026	Colour Contrast	Usability testing, accessibility testing	No Data Inputs Needed Tester checks contrast. Example: Text readable.
16/04/2026	Alt Text on Images	Usability testing, accessibility testing	No Data Inputs Needed Tester inspects images. Example: Images have descriptions.

16/04/2026	Dark Mode	Usability testing, accessibility testing	No Data Input Needed Tester presses dark mode button Example: Upon pressing the dark mode button in the accessibility menu, the website turns to dark mode
16/04/2026	Accessibility Menu	Black Box Testing, Integration Testing	No Data input Needed Tester finds the accessibility menu and presses any accessibility options needed Example: If Tester needs dark mode, they turn dark mode on
16/04/2026	Dashboard Page	Black box testing, functionality testing, security testing, integration testing, performance testing	Data Inputs Needed <u>Test Data</u> Normal: User Role: Farmer Orders: 5–10 existing orders Erroneous: User Role: Normal user Orders: No orders available Extreme:

			User Role: Farmer Orders: 1000+ orders Must have implemented the farmer dashboard functionality. The system must be connected to the database to retrieve and display order data. Role-based access control must be enforced. Tester will log in as different users and access the dashboard. Example: A farmer should be able to view orders and dashboard data. A normal user should be denied access. The dashboard should load correctly even with a large number of orders.
